

AFFAN YOUSUF SIDDIQUI

Flutter Developer

Mobile Applications · Cross-Platform Systems · Real-Time Data

+91-9910254442 | affanyousuf26@gmail.com | [Portfolio](#) | [LinkedIn](#) | [GitHub](#) | pub.dev/gremsy_camera

SUMMARY

Flutter Developer with 1+ years of experience building scalable, high-performance cross-platform mobile applications using Flutter and Dart. Skilled in REST API integration with Dio, state management (BLoC, Riverpod, Provider), and modular application architecture. Delivered production Flutter apps across UAV ground-control, geospatial, and IoT domains, including EnSight GCS — a real-time, mission-critical Android/Windows application — and gremsy_camera, a published open-source Dart package on pub.dev. Comfortable working across Product, Design, and Engineering teams to ship reliable mobile software.

WORK EXPERIENCE

Flutter Developer / Mobile Systems Engineer | Enord Pvt. Ltd. — IIITD Innovation & Incubation Centre, New Delhi *Jul 2025 – Present*

- Build and maintain production Flutter modules for EnSight GCS, a cross-platform UAV Ground Control Station app supporting Android and Windows.
- Implement scalable state management (Riverpod, Provider) across telemetry, mission planning, payload control, and connection-management modules.
- Integrate REST APIs and real-time WebSocket/UDP/TCP/USB communication layers for live data streaming and device connectivity.
- Design modular, reusable application architecture to support high-frequency data updates and maintainable feature delivery.
- Debug and resolve production issues across telemetry, networking, and UI layers in a fast-moving, field-tested Flutter application.
- Collaborate with backend, QA, product, and field teams to ship reliable, mission-critical mobile software.

Application Developer Intern | Mr. Technical Veer Digital Services, New Delhi *Feb 2025 – Jul 2025*

- Built and maintained cross-platform Flutter applications using modular architecture and reusable UI components.
- Integrated REST APIs using Dio, with authentication handling, JSON parsing, and structured error handling.
- Implemented Riverpod-based state management across production modules; debugged issues and delivered new features.

Freelance Mobile Developer | Client: ShapeIQ *2024 – Present*

- Sole Flutter developer for a cross-platform medical IoT mobile application with real-time monitoring and offline-first data handling.
- Built alert workflows, local persistence, and scalable mobile architecture for continuous data collection.

PROJECTS

gremsy_camera — Published Open-Source Dart Package | Dart · Flutter · MAVLink · UDP Sockets

- Published gremsy_camera v0.1.0 on pub.dev (130 pub points) for controlling Gremsy gimbals and cameras over MAVLink/UDP.
- Supports gimbal angle/speed control, camera capture, zoom, EO/IR switching, tap-to-track object tracking, and real-time state streaming.
- Integrated into production workflows inside EnSight GCS for UAV payload control.

EnSight GCS — UAV Ground Control System | Flutter · Dart · MAVLink · Riverpod · Provider · REST APIs

- Developed Android and Windows GCS workflows for telemetry, command control, mission planning, geofencing, payload control, and multi-link communication.
- Designed real-time state-management flows for high-frequency vehicle data, mission state, and connection health.

Zonaro — Geospatial Territory Capture Platform | Flutter · NestJS · TypeScript · PostgreSQL · BLoC · Isar

- Designed and built a full-stack geospatial product with a Flutter frontend, NestJS/TypeScript backend, PostgreSQL database, and JWT authentication.
- Implemented GPS-based territory capture using the H3 hexagonal spatial grid, Mapbox tracking, and offline-first Isar storage with BLoC state management.

TECHNICAL SKILLS

Mobile Development: Flutter, Dart, Android SDK, iOS, Material Design, Cupertino

State Management: BLoC/Cubit, Riverpod, Provider

Architecture: Modular application architecture, reusable component design

Networking & APIs: REST APIs, Dio, JSON parsing, JWT Authentication, WebSocket, UDP/TCP/USB Serial

Local Storage: SharedPreferences, Isar, SQLite

Real-Time & UAV Systems: MAVLink v2, Telemetry, Mission Planning, Payload Control, Geofencing

Backend & Data: NestJS, PostgreSQL, Firebase, Firestore, FCM, Mapbox, H3, GPS Tracking, BLE, ESP32

Languages: Dart, TypeScript, JavaScript, Python, Kotlin

Tools: Git, GitHub, Android Studio, VS Code, pub.dev

EDUCATION

B.Tech — Computer Science & Engineering | Jamia Hamdard University, New Delhi — NAAC A+ | 2021 – 2025
