SUMMARY

Flutter Developer with hands-on experience building production-grade, cross-platform mobile applications and internal tools using Flutter and Dart. Strong exposure to real-time data handling, REST API integration, and scalable state management. Experienced in collaborating with cross-functional teams, managing workloads, and delivering features within committed timelines.

WORK EXPERIENCE

Flutter Developer / Mobile Systems Engineer

Enord Pvt. Ltd. | 2025 – Present

- Core contributor to the development of **EnSight**, an in-house **Ground Control Station (GCS)** application built from scratch using Flutter.
- Designed and implemented core UI modules, navigation flows, and responsive dashboards for operational use.
- Integrated backend **REST APIs** and real-time data streams for telemetry, system status, and command responses.
- Implemented scalable state management using **Riverpod** to handle continuous data updates and ensure predictable UI behavior.
- Collaborated with **backend, QA, and product teams** to align API contracts, feature requirements, and delivery timelines.
- Managed multiple parallel development tasks while maintaining code quality and meeting delivery commitments.
- Assisted in debugging, performance optimization, and stability improvements during testing and internal deployments.

Application Developer Intern

Mr. Technical Veer Digital Services | Feb 2025 – Aug 2025

- Developed and maintained cross-platform Flutter applications using clean, modular architecture and reusable components.
- Integrated **REST APIs** using **Dio**, including authentication handling, JSON parsing, and error management.
- Implemented **Riverpod** for predictable and scalable state management across application modules.
- Collaborated with designers and backend teams to convert requirements into production-ready features.
- Improved application stability through debugging, testing, and performance optimization.

PROJECTS

1.EnSight – Ground Control Station (GCS)

Tech Stack: Flutter, Dart, REST APIs, Streams, Riverpod

- Contributed to the end-to-end development of a real-time operational control application.
- Implemented asynchronous data handling and reactive UI updates.
- Ensured smooth coordination between frontend and backend systems.

2.Live Location Tracker

Tech Stack: Flutter, Streams

- Built a real-time location tracking application using Flutter.
- Managed asynchronous location updates and continuous UI refresh cycles.

3.Food Delivery Application

Tech Stack: Flutter, Firebase Authentication, Firestore

- Developed a food delivery application with secure authentication and backend integration.
- Implemented Firestore CRUD operations and state-driven UI updates.

4.Instagram UI Clone

Tech Stack: Flutter

- Recreated core social media UI components including feeds, profiles, and navigation flows.

5.Edu Questor(Developing)

Tech Stack: Flutter

- Developing UI components for an education-focused mobile application.

TECHNICAL SKILLS

Languages: Dart, JavaScript (Basic), Kotlin (Introductory)
Mobile Development: Flutter SDK, Android & iOS deployment, Material & Cupertino widgets
State Management: Riverpod, Provider
Backend & APIs: REST APIs, Dio, Firebase Authentication, Firestore, Firebase Cloud Messaging
Tools: Git, GitHub, Android Studio, VS Code

EDUCATION
